Education:

Bachelor of Engineering (Computer Engineering Co-op)

September 2022 - Present

University of Guelph, Guelph, ON

- Relevant Courses: Engineering Design I and II, Object Oriented Programming, Data Structures, Digital Systems, Robotic Systems, Signal Processing, Electronic Devices.

Projects Experience:

Productivity Game/App - Personal Project

November 2024 - Present

- In the early stages of developing an app that helps people be productive in a more fun and exciting manner.
- The app will reward task completion and time that was spent productively with an in-game currency
- The users can use the currency in other aspects of the game that are not fully set in stone at the moment
- The app will target Mobile users on both Android and IOS users and will be mainly developed in React Native and Node.js

Guelph Engineering Competition - Guelph, ON

October 2024

- Participated alongside three other peers in the competition that was themed around robotics
- Design a robot that had a given task to complete and collaborate with other teams in order to score points
- The robot was capable of following a path, assembling 2 halves of a ball placed apart from one another, combining them and dropping them in a cup.
- Achieved third place in the competition with very little gap from second and first places.

Java Networking Project – Guelph, ON

January 2023 - April 2023

- Worked with three peers to create a networking program for data organization and filtering.
- The program was able to access and use resources from an online database.
- The program was developed to do various filtering and sorting processes on specific sets of data that were provided.

University of Guelph – Design II Project - Guelph, ON

January 2024 - April 2024

- Working with a group of peers to design a Kinder Egg toy themed mechanical device.
- Designed a mini spaceship launching station with a locking mechanism that could be released to launch.
- Pitched the design with a powerful marketing strategy to a group of judges including the course professor.
- Working in a group of five peers to reverse-engineer a CyberHand that uses hydraulic mechanics to be operated.
- Modelling, assembling, and animating over sixty unique pieces and over two hundred overall pieces for the full model.

Employment Experience:

Youthforce - Team Supervisor – Kitchener, ON

July 2022 - September 2024

- Worked with The Region Of Waterloo as a Team Supervisor for the Youthforce program leading seven individuals to perform landscaping tasks around the region.
- Took initiative to rework the region's project proposal creation system using Excel to better communicate the vision of the projects and speed up the process by about 40% which received great feedback from the higher-ups.

Mohawk Holdings - Warehouse Manager – Brantford, ON

April 2023 - December 2023

- Managed inventory, import, and export both physically and digitally.
- Supervised and managed five employees with high leadership and social skills that doubled workflow efficiency.
- Quick to help coworkers in various positions of work.
- Designed a more practical inventory system which improved efficiency by over 200%.

Coil Care - Office and Inventory Management – Cambridge, ON

July 2019 - September 2021

- Managed the inventory of a warehouse using Excel to optimize the usage of the space available for better use.
- Provided part-time office support through administrative and inventory completion.
